# BOSCH RESIDENTIAL ALARM SYSTEMS

Security you can rely on.

Known for quality, reliability and durability.

## Peace of Mind

A Bosch Security System can give you peace of mind. Whether you're away or at home, the alarm system can provide additional protection against threats to your loved ones and property. With the availability of Panic/Distress functions, Partial Arming (for example downstairs only for night-time) and options to connect to a 24-hour monitoring service, your Bosch security system can provide responsive assistance when you need it most for your family and the assets you have worked hard to own.

## Simplicity of Use & Additional Functions

To operate, all it takes is "one touch." By simply holding the '#AWAY' key you can arm your system in Away mode. To disarm, simply enter your four-digit code. Alternative arming and disarming options include key-fob remotes and mobile devices with a Bosch RSC+ App. Security systems can also be used to control your garage and front doors and if fitted with additional components. Ask your consultant for options.

## Modern and Stylish Keypads

Bosch alarm systems are available with an Icon LCD and Button Keypad (right) or a Touch Screen Keypad (pictured above).

## RSC+ APP

Smart phone control  
and event notifications

Arm or disarm your alarm system from anywhere. Know when your loved ones get home or leave and be notified when an alarm event occurs. These are some of the available functions with the FREE Bosch RSC+ App.\*

\*Requires an IP Module for remote mobile control. RSC+ App and Notifications are free of charge.

# INDUSTRY LEADING ALARM DETECTORS

## Industry Leading Reliability

Bosch detectors are well known in the security industry for their quality, accuracy and reliability. Bosch holds numerous patents for alarm detector technology and their high-catch performance as well as low false-alarm rates are outstanding. Furthermore, Bosch alarm components, including detectors, come with a three-year guarantee. Their quality means they are bound to last and perform for many years to come.

## Very Friendly to Your Pets

Bosch TriTech Detectors (optional) incorporate multi-sensor technology that allows the alarm system to distinguish between a human and a dog or cat for example. If you have pets that come and go inside the house, then the TriTech sensors are the ones for you. Only Bosch TriTech detectors measure the range to target and can distinguish from a fly at 30 centimetres and a person at 18 metres or a dog at 10 metres, virtually eliminating false alarms from animals and insects.

## MICRON RESIDENTIAL INTERCOMS

Screen visitors and control doors and gates.

Know who is on the other side before you open the door.

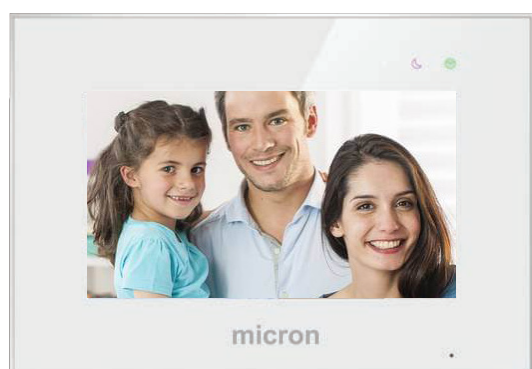

### Screen & Record Who is at the Door

Micron intercoms allow you to easily and safely screen who wants to get access to your home. For added piece of mind, the door station can also be set up to either take a picture or record a short video of who is at the door.

### Touch Button or Touch Screen Options

Whether you prefer the functionality of incorporated buttons, or the smooth look of the touch screen, we have either as an option for your monitor choice.

### Multiple Screens

There is no need to run to the front of the house every time the door rings. Up to 4 monitors can be connected in parallel, so no matter how small or how large your home is, there is a suitable number of monitors that can be installed. For smaller single-storey houses common locations include entry hallway and kitchen/living area, while for larger houses an additional third unit is most often installed upstairs.

# SCREEN AND OPEN REMOTELY

Ideal when you can't get to the door quickly.

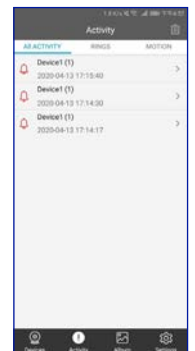

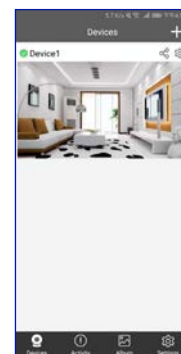

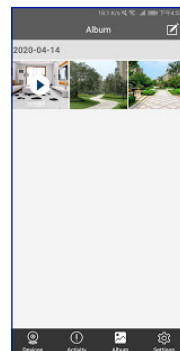

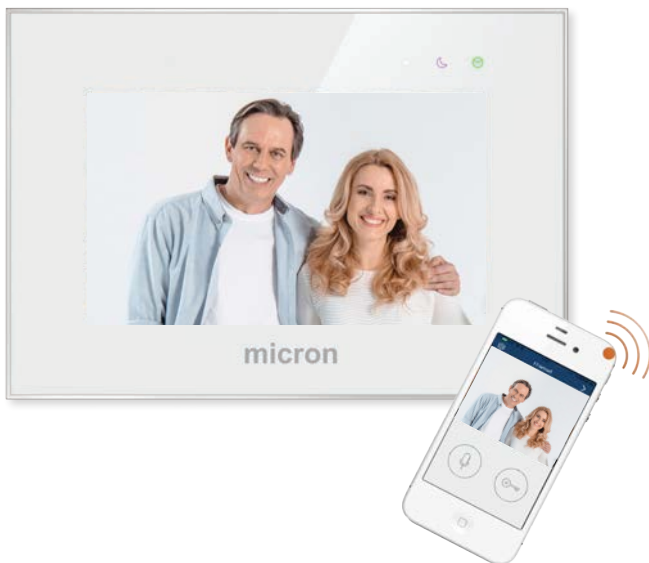

Answer your front door, talk to your visitors or even unlock your gate or door to let your visitors in from anywhere via your smart phone.

## IP/Wi-Fi Versions

Working in the garden when the door rings? At the corner shops when your in-laws arrive? At work when a delivery can be left behind the gate? Has a loved one forgotten their keys? The solution is a Wi-Fi and IP enabled Intercom. Both of the Micron Touch Button and Touch Screen Intercoms are available in Wi-Fi /IP versions.

With the free Micron Intercom App, your family will be able to answer the doorbell from anywhere. Remote opening of gates and doors is possible with the installation and connection to electronic door strikes and gate motors.

## Micron Intercom App

The free Micron Intercom App for Android or iOS allows you to answer the door and unlock door and/or gates from anywhere on your mobile device.

## VIDEO SECURITY

Deter thieves & see what's going on at home from anywhere.

### Increased Security and Deterrence

A video security system adds yet another layer of security to your home and is a strong deterrent to burglars and vandals.

Apart from being a deterrent a video security system records everything it can see. Hence if there has been an alarm event, you are able to check who or what has caused it. In the event of a break in, video footage can help with insurance claims, and may also help the Police to identify the intruder and recover property.

### Micron Cameras and Recorders

Micron video security products are manufactured by the third largest video security company on the global stage. The video security systems provide excellent performance at affordable prices.

### Free Smart Phone App

The Micron IP Video App allows users to log into their CCTV system remotely from anywhere.

This is ideal for example to check when kids come home from school, or when the family is on holidays and an alarm event occurs, or a delivery is scheduled when away from home.

# CAMERAS FOR ALL SCENARIOS.

Great footage 24/7.

## Turrets, Bullets & Domes

Turrets are the most common camera body types sold in Australia. They are easy to install, make a small footprint and are considered good, general all rounders. Bullet cameras provide a bigger physical presence, but generally have the same performance and specification as their turret counterparts. Dome cameras generally are the best option for vandal protection, however not all are vandal rated.

*Turret, Bullet and Dome Camera Formats (Left to Right)*

## PTZ Cameras

PTZ cameras are used when you need to zoom in and out frequently and if object tracking is required. The cameras are able to pan, tilt and zoom. They are much larger physically than other cameras and are generally more expensive than other types of cameras. They are ideal for video monitoring of larger properties.

*PTZ's are Ideal for large properties where long-distance detection and frequent zooming in and out are required.*

## LightHunter/StarLight Cameras

LightHunter cameras incorporate technologies that provide greater performance in ultra-low light. Images tend to be brighter, sharper and more colourful (especially in low-light settings) when compared to standard cameras.

*Colour chart comparison in low light. Camera with LightHunter technology was used on the right.*

## Benefits of Video Security

- Another layer of security
- A deterrent for most criminals
- View live camera footage from anywhere
- May provide extra insurance discounts
- Added protection for loved ones and assets
- Can work in conjunction with alarm systems
- Irrefutable video proof if you need it

# LEADING BRANDS. LEADING SOLUTIONS.

**BOSCH**  
Invented for life

Bosch is a global company with local presence in over 60 countries including Australia. Their Solution alarm systems are specifically designed for Australian conditions and feature industry leading intrusion detectors that provide outstanding catch performance and minimal false alarm rates. It is no wonder that Bosch holds a wide range of intrusion technology patents including the invention of Pet-Friendly detectors. With a Bosch Solution alarm system you get home security you can rely on.

Micron have been serving the electronic security industry and home building market since 1983. Micron represents and distributes products from only the best manufacturers in Intrusion Detection, CCTV, and Video Intercom. We recognize that in the sensitive field of security, reliability is paramount and equipment must be manufactured to exacting standards. That's why our CCTV and Intercom products will keep your home more secure and provide the optional convenience of mobile device accessibility.

UNIVIEW is one of the largest video manufacturers in the world and their IP video surveillance product lines including IP cameras, NVR, Client Software and app, cover diverse vertical markets including retail, building, industry, education, commercial, and city surveillance. Uniview endeavors to build a safer world by providing professional, reliable and cutting-edge products and services.
